Excellence in cryotherapy
Breakthrough ergonomics, beautifully functional with the instrument to respond to your fingertip touch, H&O designed CryoProbe x to be like no other cryotherapy instrument. We did extensive research to establish it as the benchmark for accuracy and performance in its field of application. Every detail is tailored to accommodate the tasks that you go through in the course of a treatment procedure. So you hold, see and work well, all at the same time.

Save time and give the best possible treatment
Keep your eyes on the field of operation at all times thanks to the ergonomic concept. Work with a very fine jet of liquefied gas to offer pinpoint precision and avoid any damage to adjacent healthy tissues. Manage unparalleled freezing power with penetration at very fast rate vital for successful cryotherapy treatment. CryoProbe x will adapt and adjust to you throughout the day. As a result, it offers excellent comfort and safety for yourself and for your patients. You optimize workflow and clinical productivity with all the practical features to complement your professional skills. Plus, it is easy to use.

CryoProbe x, extraordinary quality
Every instrument, every component, every connection, each as reliable as the next. After more than 10 years of experience, the H&O ambition remains the same: to deliver the most reliable instruments on the market by only using proven components, materials and techniques. And we back it all up with an uncompromised quality management system: CryoProbe x is developed, manufactured, sold and serviced in accordance with ISO 13485:2003 certifications. For cryotherapy instruments you can rely on, you can always rely on H&O Equipments.
**Designed to be effective**

Cryotherapy has been well established as a successful method of destroying tissue while keeping the fibrous structure intact. It is particularly suitable since intra and postoperative problems such as haemorrhage, infection and follow-up care are minimal to nonexistent. The treatment is being accepted as a preferred technique by the medical profession because of its wide acceptance by patients. CryoProbe\(\times\) is a very practical and affordable solution for cryotherapeutic application in veterinary practice. The CryoProbe\(\times\) is a great value because it is maintenance free, it does not require anesthesia or follow-up care, it speeds up the procedure time to 15-30 seconds and it creates minimal discomfort to the patient.

**So simple and safe to work with**

The CryoProbe\(\times\) allows you to work with great speed. The duration of the treatment time will depend on the surface area and the thickness of the tissue being treated. Estimation of the thickness is based on your clinical experience. The penetration rate of freezing is approximately 1mm per 5 seconds with a maximum freezing depth of about 5mm. Consequently when treating a lesion that has a visual thickness of 3mm, it will take 15 seconds to the point where you will stop treatment.

**Indications for using CryoProbe\(\times\)**

CryoProbe\(\times\) affords the portability of use for treatment of most skin lesions effectively and with little preparation required. It is the ideal solution to remove verrucae, cysts, eyelid tumors and skin tumors and other.

**Practical and thoughtful features.**

**Authentic comfort.**

With CryoProbe\(\times\) the use of small gas cartridges, 8g or 16g will simplify the operation. These come in boxes of 24 Peelpack units for 8g cartridges and in boxes of 6 Peelpack units for 16g cartridges. 8g cartridges can be used to treat multiple lesions on one patient. 16g cartridges introduce easy access to more treatment options and exceptional standards of flexibility. A selection of micro-applicators with various flow rates are available. Ask your distributor.
